Global Approach to Safety
5 or 6-day Seminar

This intensive 5 or 6-day seminar, designed for the Petroleum Industry, meets OSHA Standards and API's recommended practices.

Objectives:
Develop awareness of the hazards associated with various tasks of the Petroleum Industry and train on the Safe Work Practices to control these hazards.

Intended for:
Employees, supervisors and contractors working in confined spaces (tanks, separators, excavations, etc.) and other high-risk tasks on a petroleum site.

Acquired Knowledge:
- Proactive safety principles
- Characteristics and hazards of Petroleum Products
- Emergency procedures in case of a spill or fire
- Emergency procedures in case of a splash (eyes, clothing), ingestion, etc.
- Static electricity: generation, dissipation, safety measures
- Fall protection, scaffoldings and ladders
- Electrical Safety and Lockout/tagout
- Working in a confined space: preparation, entry and rescue
- Safe Cleaning of a Petroleum Storage Tank and use of Vacuum Trucks
- Toxicology
- Personal Protective Equipment (PPE)
- Principles of hazard control and safety permits.

Pedagogical approach:
Theoretical and practical training

Note:
Limited to a maximum of 12 participants due to extensive practice. Requires access to a large training room, preferably close to the practice area, and use of specific equipment. A list of equipment required will be supplied.
